Age (35,)/ Female

SONOGRAPHY OF GRAVID UTERUS(Anomaly Scan)

This examination shows a single live fetus in variable presentation

The placenta is Fundo-Anterior in position and of grade II maturity

The internal os is closed. Cervix measures 3.4 cms

Amount of liquor is: normal

Fetal Cardiac activity and movements are present. FHR :162 bpm

Fetal parameters are follows

| Parameters         | Measured Values | Weeks           |
|--------------------|-----------------|-----------------|
| B.P.D              | 4.31 cms        | 19 weeks 0 days |
| O.F.D              | 5.89 cms        |                 |
| Haed Circumference | 16.21 cms       | 19 weeks 0 day  |
| ABD Circumference  | 13.65cms        | 18 weeks 6 days |
| Femoral Length     | 3.28 cms        | 20 weeks 2 days |
| Humerus            | 2.82 cms        | 19 weeks 1 day  |
| Radius             | 2.41 cms        | 19 weeks 0 day  |
| ULNA               | 2.72 cms        | 20 weeks 0 day  |
| TIBIA              | 2.53 cms        | 19 weeks 0 day  |
| FIBULA             | 2.48 cms        | 18 weeks 4 day  |

L.M.P: 30.5.2023    Menstrual Age : 19 weeks 0 day    EDD(LMP): 06.03.2019

Estimated Fetal Weight is 299 gms(-/+ 44 gms)

Conclusion

The average age is 19 weeks 2 days and No abnormality

Advice:2D Fetal ECHO at 22-24 weeks for better cardiac Evaluation
